

How the generated posterior guides sequential fatigue testing

**Stage 0: two anchors
select point 3**

MAE 0.169 | $|\Delta\sigma_{10^6}|$ 3.36 MPa

**Stage 1: three observations
select point 4**

MAE 0.115 | $|\Delta\sigma_{10^6}|$ 2.82 MPa

**Stage 2: four observations
posterior update**

MAE 0.045 | $|\Delta\sigma_{10^6}|$ 0.01 MPa

MAE 0.549 | $|\Delta\sigma_{10^6}|$ 3.02 MPa

MAE 0.168 | $|\Delta\sigma_{10^6}|$ 0.77 MPa

MAE 0.150 | $|\Delta\sigma_{10^6}|$ 0.42 MPa

MAE 0.307 | $|\Delta\sigma_{10^6}|$ 38.03 MPa

MAE 0.211 | $|\Delta\sigma_{10^6}|$ 32.63 MPa

MAE 0.140 | $|\Delta\sigma_{10^6}|$ 11.04 MPa

● Observed ★ Selected next stress ■ Ensemble 90% interval
△ Candidate stress — Posterior mean - - Complete-curve truth
